Introducing Campus Cashless Payments Solutions for Schools

Onsite Campus payments are a multi million dollar business for most schools. However in many cases, payments in the canteen, at the bookstore, or at the photocopy machine are still performed using cash and administered manually. This can cause significant challenges and headaches to school administrators and missed opportunities for cost savings or increased revenue generation.

Paying for lunches with cash can cause long and slow queues, sometimes causing students to rush, or in the worst case miss out on their meals. It can also cause problems in the playground. Students can misplace, misuse or even have their money stolen.

Parents often have little control over what their children eat for school lunches and without reasonable guidance their children could end up on a diet of fried rice, pizza and French fries.

These problems can be solved with a modern, cost effective cashless payments system that provides students, staff and parents with an effective means of performing their purchasing needs both around the school grounds and online.

Introducing Campus – The cost effective solution to these challenges.

Campus provides an online ordering and cashless payment solutions for schools. It is easy to implement, easy to use, secure and cost effective. Some of the benefits include:

- Better planning, control and management over campus payments
- Reduced administration overheads and costs
- Direct savings through better cash flow management (prepaid funds)
- Improved meal planning and reduced food wastage
- Increased revenues through higher spend and more usage of canteen facilities
- Fast and efficient payment process, quicker service, shorter queues
- Reduced cash handling, better reporting and reduced cash shrinkage
- Improved school safety by minimising cash on the campus
- Provides parents better control on children's campus eating and spending habits
- Reduces student and parent complaints by offering an excellent quality service
- Provides value added functions such as event planning

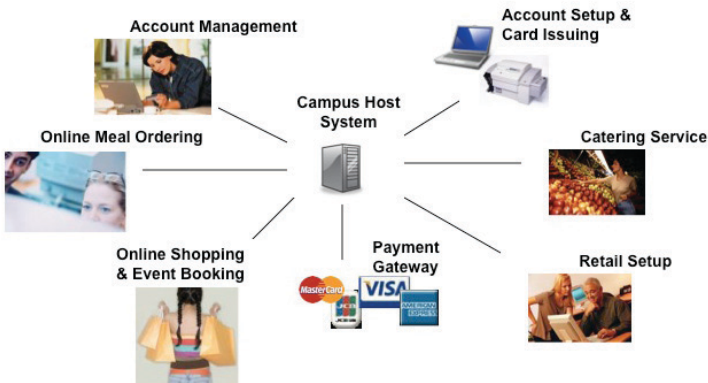

Campus eliminates the need for cash in the school environment. Both the Campus Card and the online account are used for purchasing items from the canteen, paying for school excursions, settling school fees, purchasing text books and stationary items, and making other school related payments.

Campus provides Point of Sale (POS) software designed to specifically meet the needs of a busy canteen environment, a tuck shop, a book and stationary shop, or online stores providing school

VERTICAL PAYMENT SOLUTIONS

uniforms. This is easily customised to support the schools range of meals and products provided.

Campus manages all the payment related transactions on behalf of the school and provides reporting to administrators and parents. It is an ideal tool to help manage your catering provider in schools where the catering is outsourced. Campus also provides a student ID card issuing solution, enabling school badges to be issued in batches or individually reissued when lost.

Busy parents are able to order their younger children's meals using the online ordering solution from a personal computer, PDA or any other device with an internet connection. Permission for school excursions and extra curricular activities can be granted or denied by the parent online. Payments for these activities can be debited from the Campus account or credit/debit cards.

Campus cards and the Campus online account can be updated, and online payments for school fees can be tracked and settled, using a range of payment options depending on your requirements. These may include Visa, MasterCard, PayPal, local payment schemes or direct bank account transfers if available.

Campus solutions are divided into modules that are administered through a personal computer or a touch screen POS. The overall solution is designed to integrate with existing school administration and database management applications. The solution can also be further customised to satisfy your individual school business requirements.

Campus – A good track record

The Campus solution has been in operation for over 6 years and has implemented in some of the top international schools in Asia including:

- Australian International School of Singapore
- International School of Bangkok
- Taipei American School
- Tanglin Trust School of Singapore
- Faith Academy School Manila Campus
- International School of Beijing

“With over 1,000 customers, queues at meal times were previously unavoidable in the school canteen. However, after adopting Campus Cards for our Student ID, students were able to quickly and easily purchase their meals with a quick tap of the Campus Card at the cashier. Campus has also helped us reduce our administration costs by eliminating cash from the canteen. Parents are able to add cash, limit usage and monitor purchases using the online web portal, all of which lead to educationally valuable conversations at home about diet and budgeting.”

Stephen Lehmann

Director, Information Technology - International School of Bangkok

More Information

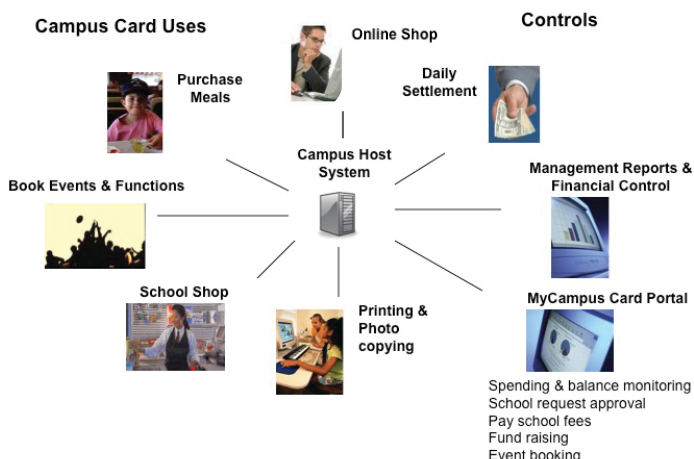

Campus is a solution provided by Vertical Payment Solutions. For more details please contact us by return email or to sales@mycampuscard.com or erict@mycampuscard.com
