

Campus Hand-POS

Campus Hand-POS is a compact Point of Sale device that can be used in a variety of situations depending on the end users needs.

Hand-POS is primarily a PDA unit that runs a modified version of Campus Smart-POS Point of Sale application. By having a completely network independent and internally powered PDA device available, schools can have an extremely powerful backup device that can be called on for business continuity in the event of an electrical outage or network failure. Hand-POS can continue to work under these situations when your regular POS can no longer operate.

New stock items can be added to the Hand-POS screen in minutes making it suitable for situations where new items are being added to the menu daily or hourly.

Campus Hand-POS can be used as an offline sales collection unit and the sales can be later synchronised with the server if the network is down. Alternately sales can be uploaded directly to the database server in a live sales environment.

Campus Hand-POS reduces long queues in busy periods. It can be used by "floor walking" canteen and restaurant staff to take orders from customers or in an off-campus environment during school sports days or field trips. Sales will be uploaded to the server by staff once they return to base.

Hand-POS comes with a built in attendance module. Hand-POS Attendance is designed to capture student or card holder's attendance by tapping the contactless smartcard on the Hand-POS RFID reader. Hand-POS Attendance captures the card holder information and provides reports on student location or attendance based on the location where the card was read.

No longer do teachers and staff have to rely on paper based student lists or manual head counts. Hand-POS Attendance captures the attendance and provides the data for you. This information can be populated online for parents to check on their child's daily attendance or back to school administration programs if required.

Campus Hand-POS is a multi-functional independent device designed to streamline administration in an effective and secure manner.

Campus Hand-POS

Features:

- Rugged design for busy canteen environments
- Captures online or offline sales
- Powerful RFID reader that reads multi standard RFID cards including Mifare.
- Can be used as a Point Of Sale (POS) device or an Attendance tracking device with no configuration changes
- Easy to use

Suitable for:

- Retail environments that require a hand held mobile POS
- Clearing queues during peak hours as a mobile POS
- A backup POS in the event of power outages or network failures
- Retailers who require RFID contactless card reading capability on their mobile POS units
- Student examination attendance recording
- Capturing student location on school field trips
- School bus attendance recording
- Restaurant staff to capture table orders as a mobile POS

Technical Specifications:

- Requires Windows Mobile 5.0
- 1 x spare SD slot for RFID reader
- 128MB RAM
- Microsoft Active Synchronisation
- Wireless connectivity optional
- Personal Desktop Assistant (PDA) host
