

Campus Mini-POS

Campus Mini-POS fills the gap between the fully functional touch screen Point of Sale Smart-POS and the versatile hand held Campus Hand-POS unit.

Mini-POS is designed for situations that do not warrant the cost or full functionality of the Campus Smart-POS, but still require a feature rich touch screen point of sale unit. The Mini-POS can be mounted as a stationary unit or moved to any network point to provide a flexible and mobile point of sale solution.

Mini-POS uses the latest in embedded microprocessor technology and touch screen graphics technology by utilizing the Cadmus AC8000M Touch screen counter top terminal.

With its sleek design and low power consumption the Cadmus AC8000M makes an ideal POS solution that is both cost effective and flexible.

New stock items can be sent from the Mini-POS host management system down to the network of Mini-POS units in your network in just minutes.

This product is suitable for multi-payment and high traffic retail businesses whereby the merchant can process different customer payment options quickly and accurately. The AC8000M suits businesses such as canteens and cafeterias, uniform, stationery and book shops, post offices and convenience stores, mini marts and gift card suppliers.

Mini-POS has an inbuilt thermal printer and can connect to smartcard readers, cash drawers and secure pin pads for credit card processing, making it a very powerful but lightweight Point of Sale solution.

Weighing just 275 grams Mini-POS can be set up anywhere, anytime the need arises!
