

Campus Smart-POS

Smart-POS is a powerful, easy to use, Point of Sale application that accepts student smartcards to create a cashless canteen.

Smart-POS provides canteen managers and school administrators with comprehensive reporting. Reports can be run on individual POS machines or as a consolidated total where multiple POS machines are used. Student sales history is also available in report format on the secure Campus Online web page allowing parents to monitor the spending habits of their children instantly.

Smart-POS has an offline mode that can be used in times of network outages, ensuring that your canteen is operational 100% of the time. Once the network is restored, Smart-POS will synchronise with the server and upload all the offline sales.

Smart-POS utilizes touch screen technology providing cashiers with fast sale completion times and quick and easy searches for stock items. It was designed with ease of use in mind so training new staff to use the system is not an issue.

If your environment has multiple vendors then no problem! Campus allows for multiple vendors to use the Smart-POS system and for individual reporting based on each vendor. Campus does the vendor financial report breakdown for you!

Campus Smart-POS coupled with the Campus contactless smart card reader can reduce sale time from up to a minute to just a few seconds. A quick tap of the smartcard and the sale is completed. Queues and waiting time are significantly reduced with Smart-POS and Campus Smart Card technology.

The Smart-POS system has inbuilt security features to reduce the chance of smartcard fraud. When a customer taps the card on the Campus smartcard reader, a photograph of the card holder is displayed on the cashier's POS screen. As the Campus card has the holders photo printed on the card, the chance of fraud is greatly reduced.

Smart-POS can control any parental daily spending limits as well as restrict purchases of items that a parent has imposed on a student's card. Parents simply set the rules for the card via the Campus Online web page. These rules are then picked up and imposed by Smart-POS once the card is tapped on the Campus smartcard reader.

Smart-POS comes with an optional customer loyalty module. If you are thinking of introducing a customer "rewards" program, then Smart-POS is for you!

Campus Smart-POS

Features:

- Rugged design for busy canteen environments
- Touch Screen technology for fast results
- Can be run on a desktop computer or laptop saving you the need to buy specialised POS hardware
- Offline sales functionality
- Manager Menu screen for loading restricted buttons such as refunds and discounts
